

# Symantec™ Developer Program

Extending the value of your Symantec investment

---

## Overview

The Symantec™ Developer Program is a subscription-based program that provides software development kits (SDKs), support services, and developer communities to help Symantec customers and partners leverage the Symantec Management Platform.

---

## Designed for Symantec customers and partners

The multifaceted Symantec Developer Program is designed to help both Symantec customers and business partners extend the value of Symantec solutions through a centralized community with access to developer forums, SDKs, technical support and training, and supplemental documentation. The program consists of multiple subscription levels targeted at supplying the necessary tools, communities, and support for Symantec customers, partners, and independent software vendors (ISVs).

---

## Software development kits

SDKs are at the core of the Symantec Developer Program. There are two SDK options for customers and business partners to integrate Symantec solutions with third-party or homegrown applications, extend their current Symantec investment, or rapidly develop unique solutions using the Symantec Management Platform. The following SDKs provide a code library consisting of Application Programming Interfaces (APIs), Command Line Interfaces (CLIs), Web services, and other programmatic interfaces:

- **Administrator Software Development Kit (ASDK)**—Helps Symantec customers and business partners automate and configure Symantec solution functionality, create process-based connections to third-party and homegrown applications, or leverage Symantec functionality from homegrown Web applications.
  - **Solution Developer Software Development Kit (SSDK)**—Helps partners build unique commercial solutions or extend existing applications on the Symantec Management Platform that are intended to be sold commercially.
- 

## The intersection of communication

The Developer Portal is designed to provide a centralized source of content and resources for both customers and business partners. The portal hosts the latest SDK and documentation updates, a library of frequently asked questions, and supplemental sample code and documentation.

The Developer Portal is also home to Symantec developer-oriented forums, which enable administrators and developers to post questions, review answers to common topics, share code, and interact with peers, including Symantec customers and business partners.

---

## Customer service offerings

A wide range of support, consulting, certification, and assistance options are available through the Symantec Developer Program. Electronic and phone support
