## Deployment Solution™ for HP Thin Clients

.....  
 REDUCE THE TIME AND COST OF MANAGING YOUR HP THIN CLIENTS

### BENEFITS

- > Single deployment solution for your HP Compaq thin clients allows you to deploy out-of-the-box in just minutes
- > Secures management features from unauthorized personnel
- > Save as much as 80 percent on maintenance costs
- > Control software and files from a central console
- > Supports heterogeneous operating systems, including Windows XP Embedded, Linux, and Windows CE
- > Online training and guides available at <http://www.altiris.com/hptc>

Altiris® Deployment Solution™ for HP Thin Clients helps reduce the cost of deploying and managing your HP Compaq t5000 thin clients and the HP Blade Workstation Client from a centralized location in your environment. This easy-to-use, automated solution offers operating system deployment, configuration, and software deployment across Microsoft Windows CE, Microsoft Windows XP Embedded, and HP Embedded Linux.

### COST-EFFECTIVE ENTERPRISE INTEGRATION

Organizations choose HP Compaq thin clients to reduce hardware and software duplication across their network, perform tasks, or access Web browsing, Java-based, terminal emulation or line of business applications. To deploy thin clients quickly and easily, Deployment Solution for HP Thin Clients is included with your HP Compaq thin clients at no additional cost.

### WHY HP COMPAQ THIN CLIENTS?

HP Compaq thin clients include these benefits:

- > Deploy out-of-the-box in just minutes
- > Control software and files centrally
- > Solid state for higher reliability
- > As much as 80 percent maintenance savings
- > More secure environment

### HANDS-OFF DEPLOYMENT

Deployment Solution for HP Thin Clients makes it easy to deploy your HP Compaq thin clients in minutes. For example, you can build a reference system by turning on your thin client and customizing the image by installing or removing needed applications. Once your reference system has been built with your standard operating system and applications, you can mass-deploy an image of the reference system to your new and existing systems. Because every system is unique, you can assign security IDs (SIDs) and configure user names, IP addresses, and other network settings.

### THIN CLIENT CONSOLE VIEW—NEW!

With Deployment Solution for HP Thin Clients you don't have to leave your desk to manage your systems. The traditional full console view allows you to use solution wizards to help you build events to perform common computer management tasks—simply drag an event onto a computer or group of computers and then run it immediately or schedule

it for after-hours. Or you can use the new default Thin Client Console View, which makes it easier than ever for “thin-clients only” administrators:

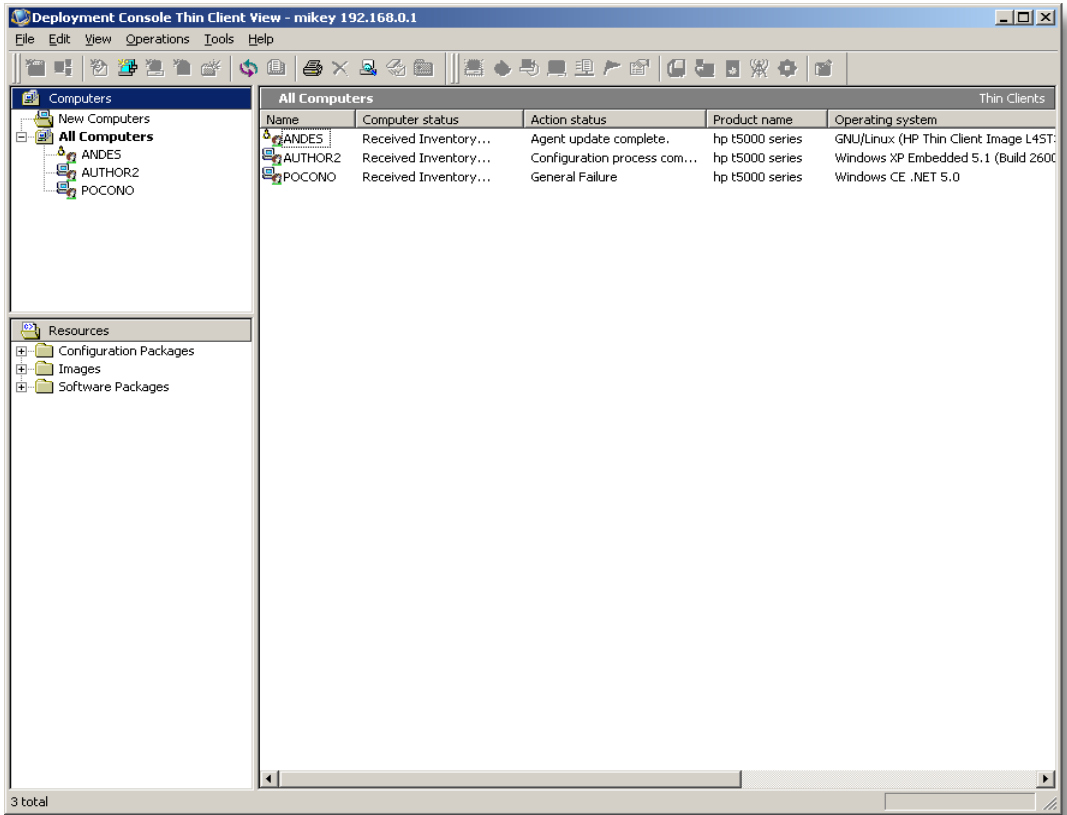

- > **Thin Client Installation Option**—High-level installation option provides a streamlined installation sequence without licensing prompts.
- > **Consolidated Panes**—Common tasks have been consolidated into three panels: Computers, Resources, and Inventory. This view is ideal for the simplest administration.
- > **Computer Pane Enhancements**—Selecting a thin client in a specific pane such as the Inventory pane allows you to display more details.
- > **Resource Pane Enhancements**—Configuration Packages pane allows you to capture and deploy thin client configurations; capture and deploy thin client system images in the Images pane; and remotely install software in the Software Packages pane.
- > **New Inventory Pane**—Detailed information is displayed in table format; specify fields and quickly sort by clicking on column headers.
- > **Right-click Selection Simplification**—Thin client views offer more options. Non-thin client options have been excluded.
- > **Views Toggle**—Quickly toggle between thin client view and full console view.

### SIMPLIFIED SOFTWARE MANAGEMENT

Operating system deployment is only part of the battle. Once your HP Compaq thin client is provisioned, you also need to deploy drivers and software updates. Deployment Solution for HP Thin Clients allows you to easily install and configure department-specific software, migrate user-specific data and settings to new computers, and remote control your thin clients as if you were sitting in front of the managed thin clients' screens.

“Included with your t5000 series thin client and providing remote management is Altiris Deployment Solution, a comprehensive standards- and Web-based solution for deploying, managing and updating HP thin clients. Only HP offers enterprise customers the ability to manage all their networked clients, both PCs and thin clients, with this industry-leading package from Altiris.”
